

WE'RE HIRING

Product manager optical fiber sensing systems

Are you challenged by identifying, defining and validating concrete product opportunities from a broad set of core technologies? Are you eager to work with PhD-level developers as well as technical end-users in a wide range of industries?

We are looking for a product manager with a strong technical and commercial drive. Working in a highly motivated, talented and versatile team, the candidate is a central hub between R&D, production, sales, marketing and customers, and is focused on setting and executing the strategy for the company's new product lines for various industrial sensing markets.

Who do we need?

We are looking for a BSc or MSc with some years of experience in both sensing technology as well as commercial activities (sales, business development, entrepreneurship or marketing). Experience and affinity with optical fiber sensing systems is a plus. The candidate should have a strong technical and commercial drive and to be able to make a difference in the dynamic environment that you find in a high-tech scale-up company.

The main task of the candidate will be to further define the company's optical fiber sensing product lines as well as the strategy to roll-out new products in the market. Understanding the advances in the R&D team as well as the needs and requirements of (potential) customers are essential to be able to define new products. You will be in close contact with the sales and marketing team to extract criteria, define specifications, produce marketing material and launch new products.

Hours: full-time

Experience level: 3-5 years

Education: BSc / MSc

What do we offer?

Optics11 is a fast growing high-tech company based in Amsterdam and is developing new optical fiber measurement systems for many different markets, with customers all over the world. Our sensing systems include acceleration sensing for condition monitoring and seismology, acoustic emission sensing for structural health monitoring, hydrophones for sonar systems, pressure and force sensing for life science applications, and much more. You will be part of a young and enthusiastic team, working in a challenging international environment, with huge opportunities to grow.
